

iGEN cfDNA kit (For Research Use Only)

Product Characteristics

Circulating cell-free DNA from serum, plasma, urine or from other cell-free body fluids based on high-efficient iGEN DNA Extraction Technology, which provides better DNA quality and yields with a minimal sample amount.

Product specifications

- Based on innovative DNA extraction technology developed by **iGEN Biotech**.
- Starting material: serum, plasma, urine or other cell-free body fluids.
- **Minimum starting amount:** just 0,5 mL (from serum, plasma and urine samples).
- **High efficiency results.**
- Easy-to-use.

- Available to use as a first step to run others genetic and epigenetic analysis technologies, such as PCR, Quantitative PCR, SNPs genotyping, etc.
- Extraction time: 90 min.

Clinical applications of circulating cell-free DNA

- Non-invasive prenatal diagnosis.
- Genotyping for cancer diagnosis.
- **Monitoring treatment response.**
