iGEN cfDNA kit (For Research Use Only)

Product Characteristics

Circulating cell-free DNA from serum, plasma, urine or from other cell-free body fluids based on high-efficient i**GEN** DNA Extraction Technology, which provides better DNA quality and yields with a minimal sample amount.

Product specifications

- Based on innovative DNA extraction technology developed by **iGEN Biotech**.
- Starting material: serum, plasma, urine or other cell-free body fluids.
- Minimum starting amount: just 0,5 mL (from serum, plasma and urine samples).
- High efficiency results.
- Easy-to-use.

_

- Available to use as a first step to run others genetic and epigenetic analysis technologies, such as PCR, Quantitative PCR, SNPs genotyping, etc.

Extraction time: 90 min.

Clinical applications of circulating cell-free DNA

- Non-invasive prenatal diagnosis.
- Genotyping for cancer diagnosis.

- Monitoring treatment response.
